

Mobile Responsive Editor Images

03/13/2018

Description

This process will describe how to make images in the Froala Editor mobile responsive.

Objectives

This will allow clients to no longer need to stack editor and image widgets on a page to create a mobile responsive page, allowing them to place the entire content in a single editor widget.

Old Method

The Greenville City Fire Department (GCFD) is a full-time professional department staffed by 159 personnel. The department provides fire suppression, education, prevention, inspection, first responder, rescue, and hazardous materials services to the city of Greenville.

The sixth largest municipality in South Carolina with an estimated population of 62,252 (2014 Census estimate) covering approximately 28 square miles, Greenville draws on a population of more than 1.4 million within a 30-mile radius of its location.

In addition to serving Greenville's residential population, GCFD is responsible for serving over 122,000 employees dispersed across 3 million square feet of office space within a five-mile radius of Greenville's downtown.

New Method

The Greenville City Fire Department (GCFD) is a full-time professional department staffed by 159 personnel. The department provides fire suppression, education, prevention, inspection, first responder, rescue, and hazardous materials services to the city of Greenville.

Greenville is the sixth largest municipality in South Carolina, at approximately 28 square miles and with an estimated population of 65,245 (2016 ESRI Business Analyst).

In addition to its residential population, Greenville also welcomes more than 2.6 million visitors each year and more than 122,000 workers are dispersed across three million square feet of office space within a five-mile radius of Greenville's downtown.

The headquarters of two major healthcare systems (Bon Secours St. Francis Health System and Greenville Health System) are located within GCFD's jurisdiction, which also includes:

- Interstate 85, a major north/south connector
- Greenville Downtown Airport, the busiest general aviation airport in the state with more than 80,000 departures and landings annually
- A Norfolk Southern and CSX railways intermodal transfer depot.

Instructions

1. Enter the text into the editor. This will help you with positioning the images later.
2. Click where you want to insert the image. As a best practice, this should be at the beginning of a paragraph. (Example locations marked in green.) Once positioned properly insert the image.

Red pandas are skilled climbers, using trees for shelter, to escape predators and to sunbathe in the winter. Their ankles are extremely flexible, and the fibula and tibia are attached in such a way as to allow the fibula to rotate about its axis. These features make it possible for red pandas to adeptly climb headfirst down tree trunks.

In contrast with other carnivores their size, red pandas have extremely robust dentition. They also have a simple carnivore stomach, despite their predominantly leaf-based diet. Red pandas share the giant panda's pseudo-thumb a modified wrist bone used to grasp bamboo when feeding.

3. Click on the Image, and from the Display button and select Inline. This will cause text to wrap around the image, and prevent large gaps.

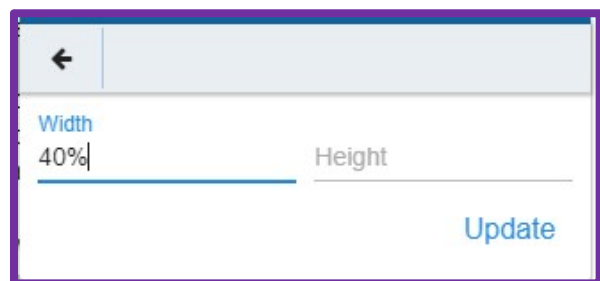

4. Determine if the image should be on the right or left-hand side of the container. (Your best practice will normally be to align to the right.)

5. Click on the Change Size button.

6. Set the Width attribute as a percentage. (You must use the % sign.) This percentage should reflect how much of the container's width you want the image to take up at maximum. Small images will not stretch to fill this amount, but images that are larger than this percentage will scale down.

7. **Note:** Do not click on the sides or corners of the image! This will manually resize the image and cause the editor to assign it a size in pixels (px). Images with a pixel size will not be mobile responsive. If you accidentally do this, or want the image larger or smaller, please repeat steps 6 & 7!
